If you don't get the prompt to save them wherever you want then....

You set this for each file type, e.g. for .zip  
Explorer-View-Folder Options-File Types  
Find the .zip association (may be WinZip File)  
Edit, (or click Advanced on ME or XP) and check the "Confirm open after download" box

The path to Folder Options may vary according to your operating system. It may be:

Explorer-View-Folder Options  
Explorer-Tools-Folder Options  
Start-Settings-Folder Options  
Start-Settings-Control Panel-Folder options.

....Alan

Hello,

I'm getting into nature songs. However, when I click a link to one, they are automatically downloaded to my temporary internet files folder. Once in there, they are difficult to find as I have thousands of files stored there. My goal is to be able to download these files (mp3, wave, au, etc.) and save them in my My Music folder, with an eye to send them to my library in Real. If you have followed me this far, I would like to know if there's any way to change IE 6's settings so that some files are not downloaded to the temporary internet files folder.

I would also like if, once I download these files, will I be able to listen

Re: download nature songs to desktop

to them if I delete them from the temporary internet files folder. it is really confusing in that some of these files, when you check their properties, are shown as being saved in either a URL (that is, a remote computer) or a media program like Musicmatch or Real. All I want is to get these files stored in my My Music folder so I can have both quick and permanent access to them. I would really appreciate any information you could give me towards this end.

Jay
