Don't you dare leave us! :-) We need all the expertise input we can get. A word or suggestion here or there can perhaps trigger a thought or perhaps something to check we did not think of yet. There is 'something' that seems to be resetting, and then blocking, the Search functions and/or functions. The fact that we can change it using the Start>Search functions, and it will work normally when changed within the functions is pretty telling of that, I think. At least that is how it appears to be happening on my end, and Anna's confirmation. I will look at what I have on here that might be interacting, but, there is nothing I have added in the past month or more. I usually only use the well established and recommended programs, but, that is not to say that some update for one of them has not created the problem.

But, we should also keep in mind that there are other OPs with other OS versions that are having the same problem, so, that would somewhat rule out just an XP update, at least in my mind. Perhaps we should try to find a common denominator in a program that we all have installed and that may have gotten updated about the same time. I don't allow autoupdates, but, I try to do the manual updates as soon as I get notified.

Hi Anna – Well, I said I was going to drop out of this thread, but since you've specifically addressed me . . . :)

SpyBot S&D is well known and I doubt presents any problem, but you can try disabling its Immunize functions as a test if you wish. As for Norton – While their commercial software and specific virus/malware removal tools are excellent, as a matter of experience I don't encourage anyone to use any of the non-commercial Norton/Symantec software, as it's notorious for

Re: Search Assistant Not Working Right – More curious...

interfering with other software (particularly on installs and with system software generally) as well as being very difficult to completely remove. If there's been any sort of recent update to it, I would be suspicious of it. I would certainly test by disabling it for a period. (There have been recent reports of other problems caused by a recent Norton update, BTW.) I would take the same approach with respect to Windows Defender – just because of it's Beta nature (although it's pretty stable apparently), and because it does get involved with "protecting" certain IE settings as well as the fact that it's a recent addition by your report.

Re: Search Assistant Not Working Right – More curious...

Re: Search Assistant Not Working Right – More curious...

|||  
||| "Jan II" <abuseSPAM@xxxxxxxxxxxxxxxxxxxx> wrote in message  
||| [news:eusx2McTGHA.6084@xxxxxxxxxxxxxxxxxxxx](mailto:news:eusx2McTGHA.6084@xxxxxxxxxxxxxxxxxxxx)  
|||| Hi all..  
||||  
|||| Here is another curious/strange behavior. Last night when I made my  
last  
|||| report, all was as it should be and working well. I closed IE and  
made no  
|||| other changes to any settings.  
||||  
|||| Just now, I opened the IE and checked the Search and Customization  
and  
it  
|||| had changed back to just the two choices and Loading.....  
||||  
|||| So....as I reported previously here that there seemed to be a method  
to the  
|||| on –again–off–again madness, I closed IE, went to  
Start>Search>Change  
|||| Preferences>Change Internet Search behavior>and saw that it had  
changed back  
|||| to With Classic search instead of the With Search Companion I had  
||| changed  
||| it  
|||| to that last time. ???  
||||  
|||| Then I selected the With Search Companion, closed the Search and  
opened IE.  
|||| The Search Companion window was there as it should be.  
||||  
|||| Then I closed IE, reopened Search from the Start menu, and went to  
Change  
|||| Preferences> Change Internet Search behavior>reselected the With  
Classic  
|||| search, closed Search and reopened IE. There is the panel was the  
normal  
|||| search window, the Customize tab and grayed out Next button. When I  
clicked  
|||| the Customize button, there were the normal 3 choices and all  
related  
list  
|||| boxes, all worked as it should.  
||||  
|||| I checked the laptop and the same change up had happened there even  
||| with  
||| the  
|||| machine turned off, and with the same set of steps necessary to  
restore the  
|||| normal Customize window.  
||||

Re: Search Assistant Not Working Right – More curious...

|||| Dang! This is really confusing! How the heck can we determine what is  
|||| causing this when there seems to be a gremlin in the works making changes  
|||| all the time? Here is another aspect. I turned off the laptop, although,  
|||| it was still plugged in to the power supply. I did not turn off my desktop,  
|||| although, all programs were closed. Thus, I did not have reboot, or  
|||| re–logon the desktop, but, did the laptop. Neither situation seemed to make  
|||| any difference.  
||||  
|||| The only thing that I can think of at this point, and it may be off the mark  
|||| by a mile, is that it might have to do with the opening and closing of  
|||| IE,  
|||| although, I did open and close the IE several times while testing last  
|||| evening and there were no changes that took place on closing that I could  
|||| tell.  
||||  
|||| However, at this point, I \*can\* make the normal Search Customize  
|||| choices  
|||| and  
|||| selections available by doing the steps that I outlined above, and all  
|||| do  
|||| work as they should. At least at this point. While it is a round–robin  
|||| effort, at least they do work for now, and hopefully, a step closer to  
|||| finding a workaround.  
||||  
|||| Perhaps Anna could test the steps that I posted here and see if they work  
|||| for her as well.  
||||  
|||| Hope this helps.

Re: Search Assistant Not Working Right – More curious...

||||| "Jan II" <abuseSPAM@xxxxxxxxxxxxxxxxxxxx> wrote in message  
||||| [news:%23XWah\\$TTGHA.6084@xxxxxxxxxxxxxxxxxxxxxxxxxxxx](mailto:news:%23XWah$TTGHA.6084@xxxxxxxxxxxxxxxxxxxxxxxxxxxx)  
||||| Hi all :-)

|||||  
||||| "Jim Byrd" <jrbyrd@xxxxxxxxxxxxxxxxxxxxxxxx> wrote in message  
||||| [news:O1lyQkJTGHA.776@xxxxxxxxxxxxxxxxxxxxxxxxxxxx](mailto:news:O1lyQkJTGHA.776@xxxxxxxxxxxxxxxxxxxxxxxxxxxx)

||||| Hi Jan – Well, the single common element you describe is core IE  
||||| exclusive  
||||| of SP1 or 2. Here's my full "fix IE" post – maybe something in  
it  
will

||||| suggest something:

|||||  
|||||

||||| There is no direct Repair function for IE6 in XP. Here are some  
||||| alternatives:

|||||

||||| First try this courtesy of MVP Ramesh Srinivasan:

||||| <http://windowsxp.mvps.org/IEFIX.htm>

|||||

||||| Then try each of the following:

|||||

||||| 1. If you're on XP SP2, try the following suggestions from KB  
870700,

||||| here:

||||| How to troubleshoot problems accessing secure Web pages with  
Internet

||||| Explorer 6 Service Pack 2,

||||| <http://support.microsoft.com/?kbid=870700#9>

||||| first. Don't worry that your problem isn't specifically  
secure–page

||||| related – these extracted below are general fix steps for the most  
part.

||||| Check to see if your problem remains after each:

|||||

||||| a. Turn off the pop–up blocker

||||| Internet Explorer SP2 includes the ability to block pop–up  
windows.

This

||||| new

||||| feature may block some Web pages. To turn off the Pop–Up Blocker,  
follow

||||| these steps:

|||||

||||| 1) On the Tools menu in Internet Explorer, click Internet Options,  
and

||||| then

||||| click the General tab.

Re: Search Assistant Not Working Right – More curious...

||||| 2) Click the Privacy tab.

||||| 3) In the Pop-Up Blocker section, click to clear the Block pop-ups check

||||| box.

||||| 4) Click Apply.

||||| 5) Click OK.

|||||

||||| b. Delete the contents of the Temporary Internet Files folder

||||| If a copy of the Web page is in the Temporary Internet Files folder,

the

||||| page may not display as expected. To resolve this problem, you must

||||| delete

||||| the contents of this folder. To do this, follow these steps:

|||||

|||||

||||| 1) On the Tools menu in Internet Explorer, click Internet Options, and

||||| then

||||| click the General tab.

||||| 2) Click Delete Cookies, and then click OK.

||||| 3) Click Delete Files, and then click OK.

||||| 4) Click Clear History, and then click Yes.

||||| 5) Click OK.

|||||

||||| c. Third-party browser extensions

||||| Some third-party browser extensions and add-ons may interfere with how

||||| Internet Explorer views certain Web pages. To turn off these extensions,

||||| follow these steps:

|||||

||||| 1) Click Start, right-click Internet Explorer, and then click Internet

||||| Properties.

||||| 2) Click the Advanced tab.

||||| 3) Click to clear the Enable third-party browser extensions (requires

||||| restart) check box.

||||| 4) Click Apply.

||||| 5) Click Ok.

||||| 6) Start Internet Explorer, and then try to reproduce the issue.

|||||

||||| OK...here's the last update thus far. After running the IEFix on the

||||| laptop, there was no change in the status of the Search window situation.

||||| Thus, I proceeded with the next 3 steps above: a) no change, b) no change,

||||| c) unchecked and then closed IE. I went to the Start>Search> and

Re: Search Assistant Not Working Right – More curious...

the

||||| clicked the Change Preferences>Change Internet search behavior>selected

||||| Classic search>selected my search engine and clicked OK. Then clicked on

||||| Search the Internet. When IE opened and the Search panel opened, the

word

||||| Search was on the top of the search bar. Clicking the Customize button

||||| opened the customize window and there were 3 choices and two list boxes,

||||| as there should be. In this window the first selection, Search Assistant

||||| is now selected. I can change the selections and new list boxes appear

||||| for each different choice selected as they should. I can change the

||||| choices and selection, however, I must close and reopen IE after each

||||| change for it to take effect. All appears to be working as it should,

||||| with the

||||| exception of the Next button, which remains grayed out.

|||||

||||| However, I don't think that we can look at what has transpired here as a

||||| possible solution until at least 24 hours without change has occurred, as

||||| things continue to change on and off as a matter of course in this problem

||||| for the past week or more. So I won't know if it is a good fix or not

||||| until some time has passed. But, at last now I am able to make changes,

||||| which I was not able to do before, even when it appeared that things

were

||||| normal.

|||||

||||| I did not proceed with the other steps below at this point, in order

to

||||| see what will happen in the next 24 hours.

|||||

||||| I hope this helps.

|||||

||||| Jan :)

|||||

|||||

||||| d. Reset the Security Zones to the default settings:

|||||

Re: Search Assistant Not Working Right – More curious...

||||| 1) On the Tools menu in Internet Explorer, click Internet Options,  
and  
||||| then  
||||| click the Security tab.  
||||| 2) Click Internet, and then click Default Level.  
||||| 3) Click Local Intranet, and then click Default Level.  
||||| 4) Click Trusted sites, and then click Default Level.  
||||| 5) Click Restricted sites, and then click Default Level.  
||||| 6) Click Apply.  
||||| 7) On the Privacy tab, click Default, and then click Apply.  
|||||  
||||| 2. Then you need to go (as an Administrator) to Start|Run and  
type  
"sfc  
||||| /scannow" (without the quotes and notice the space between the c  
and  
the  
||||| /.)  
||||| Have your XP CD handy and be prepared to go get a cup of coffee –  
it  
||||| takes a  
||||| while. This will do the same thing as Repair IE6 for XP but a lot  
more,  
||||| that is find any corrupt system files and replace them. It does  
NOT,  
||||| however, re-register the various software components, and you will  
need  
||||| to  
||||| do this manually using regsvr32.exe if any are shown as  
replaced  
||||| in  
||||| Event Viewer|System.  
|||||  
||||| Be aware that under certain circumstances (Win2k before SP4 – see  
mskb  
||||| 814510,  
||| <http://support.microsoft.com/default.aspx?scid=kb:EN-US:Q814510>)  
||||| sfc  
||||| can erroneously overwrite (restore over) previously installed  
files  
from  
||||| certain "hotfixes" which will then need to be re-installed. This  
may  
||||| also  
||||| apply to XP. To check for this, after running sfc, open a Cmd  
window and  
||||| enter "qfecheck /v /l:c:\" (without the quotes). If you don't  
have  
||||| qfecheck  
||||| installed, it can be obtained for XP here:  
||||| <http://www.microsoft.com/downloads/release.asp?ReleaseID=35468> and

Re: Search Assistant Not Working Right – More curious...

for

||||| Win2k

||||| here:

<http://www.microsoft.com/downloads/release.asp?ReleaseID=35470> A

||||| version stated to be common to both is available here:

|||||

|||

<http://www.microsoft.com/downloads/details.aspx?displaylang=en&FamilyID=155C7C58-102E-47B0-A12>

||||| Further information about qfecheck is

||||| available here: <http://support.microsoft.com/kb/282784/EN/>

|||||

|||||

|||||

||||| 3. Another alternative for just IE6 repair if you don't have IE6

listed

||||| in

||||| Add-Remove Programs, then in Start|Run then enter

|||||

||||| "rundll32 setupwbv.dll,IE6Maintenance"

|||||

||||| without the quotes, exactly as shown (it's case sensitive), and

select

||||| the

||||| appropriate entry. More detailed info is available here:

||| Description

||| of

||||| the Internet Explorer Repair Tool

||||| <http://support.microsoft.com/default.aspx?scid=kb:EN-US;q194177>

||| (You

||||| may

||||| have to re-install Sun Java JRE if you had it installed

afterwards,

BTW.)

|||||

|||||

|||||

||||| 4. If you find that you need to do a re-install of IE6 then you

can

||||| consider the following:

|||||

||||| 1) Insert the Windows installation CD in your CD-ROM drive.

||||| 2) Click Start, and click Run.

||||| 3) Copy the command prompt below in the Open box (exactly as

shown –

it's

||||| case sensitive), and click OK. (Assumes %System% is installed in

Windows

||||| on

||||| your C:\ partition. Change as appropriate for your particular

||||| situation.)

|||||

Re: Search Assistant Not Working Right – More curious...

||||| rundll32.exe setupapi,InstallHinfSection DefaultInstall 132  
||||| c:\windows\inf\ie.inf  
|||||  
||||| 4) It will display a "File Needed" screen, click "Browse.." and  
||| browse  
||| to  
||||| <CD-ROM drive>\i386, (where <CD-ROM drive> is the drive letter of  
the  
||||| CD-ROM, For example, D:).  
|||||  
||||| 5) Click Open, click Ok, it should begin reinstalling Internet  
Explorer.  
|||||  
||||| (NOTE: It has been reported, courtesy of Steve Wechsler, that if  
you're  
||||| on  
||||| Windows XP Pro SP2, it may prompt you for some files that it  
cannot  
find  
||||| in  
||||| the WINDOWS\ServicePackFiles\i386 folder, which you'll then need  
to  
||||| browse  
||||| to. It's thought that this may apply to XP Home also. The  
specific  
||||| files  
||||| are iexplore.exe which actually IS in the i386 folder,  
mswr632.wpc  
||||| , which is located in the Program Files\Common Files\Microsoft  
||||| Shared\TextConv folder, AND, INSTALL.IN\_ , which will be  
located  
||||| on  
||||| a slipstreamed XP Pro CD in the i386 folder and also located in  
the  
i386  
||||| folder on an XP Pro SP1 disk. So, copying the 2 files above to  
the  
||||| WINDOWS\ServicePackFiles\i386 folder should allow you to be able  
to  
||||| repair/reinstall IE on an SP2 system by right clicking ie.inf in  
the  
||||| WINDOWS\inf folder and selecting Install or using the rundll32.exe  
line  
||||| given above.)  
|||||  
|||||  
||||| 5. Lastly, here is a link to a MSKB article about re-installing  
IE6/OE6:  
|||||  
||||| How to Reinstall or Repair Internet Explorer and Outlook Express  
in
