Hi,

Uninstalling the update on your machine won't help other visitors to your sites. You should modify the code so that users don't have to click to allow the ActiveX component.

[http://msdn.microsoft.com/library/default.asp?url=/workshop/author/dhtml/overview/activating\\_activex.asp](http://msdn.microsoft.com/library/default.asp?url=/workshop/author/dhtml/overview/activating_activex.asp)

In a few months it won't be possible to dodge this behavior. ;-)

<http://www.microsoft.com/technet/security/advisory/912945.mspx>

Hope this helps,  
Don

Hello,

I had the same thing happen to me....but I have 30 plus websites they I

have

designed that are affected. All I did was uninstalled the last update

through

add and remove in the control panel and its working ok again....Microsoft

is

some kind of lawsuit...Not Happy with I.E.

Re: Problems with ActiveX in IE6

Hi Folks!

Recently, I have been experiencing problems when loading my Internet Explorer browser with my own Homepage of <http://www.geocities.com/alba13142003/1966> and [English Soccer Lies.html](#).

Whenever I open the browser, a Microsoft Internet Explorer alert box pops up

with the following message: "Click to run an ActiveX control on this webpage"

and there is an "OK" button. This is a new problem (and annoying one that

occurs each time I open IE) and I wonder if anyone can tell me how I stop it

from occurring?

Personally, I have made no changes in any of my Internet settings, so I do

not know why this is happening?! Can anyone please advise??

I am running XP HE with SP2 on my PC and all necessary updates installed.

.
