Hi,
You're welcome. Glad you have it [nearly] resolved.

Don
[MS MVP- IE]

Hello Don.

Things worked just fine in safe-mode, what made me, as you indicate,

suspect

another application to block that kind of javascript window. I am running
Norton Internet Security 2005 on my PC and I thought that when this was
disabled, all services running here was disabled – but no....

I found in the AntiSpam section a popup blocker, too, and when disabling
this the problem could no longer be recreated. Now I just need to find out
how to configure this popup blocker in order to leave out the britannica

page.

Again thanks so much for your interest and participation!

Have a nice day.

Best regards,

Anders

Hi,

Test your Javascript capability at this JavaScript Test Page:

<http://www.dcn.davis.ca.us/go/EXPLORIT/java/IntroJavaScript.html>

Will the new window open if you use Ctrl+click?

Re: Odd behavior – no response..

Will the new window open if you startup in Safe Mode with Networking?

That

would point to a third-party program that doesn't load in Safe Mode.

Hi Don.

- I have checked and made sure that the popup-blocker is disabled
- The firewall was temporary disabled
- No Google, MSN or Ebay toolbar installed
- *.britannica.com was added to trusted sites

I'm sorry to say, none of this helped a bit. It cannot be a damaged browser/browserfiles causing this as we have two independant Win XP

SP2

computers experiencing the very same problem. We also have an old Win 2000 SP 4 pc running, and here things works

just

fine in MSIE 6. My Win XP SP 2 at work does not experience the subject problem.

Hi,
Is a firewall or other third-party security program blocking

scripts,

Re: Odd behavior – no response..

Re: Odd behavior – no response..

scripting, active content? Are you sure that a pop-up blocker isn't

running?

Yahoo toolbar? Google toolbar? MSN toolbar?

Or...

Try placing the site in Trusted Sites (Internet Options> Security.)

Uncheck

"Require server verification" and enter the site as

*.britannica.com

Also try...

Clear out the Temporary Internet Files. IE> Tools> Internet Options> General> Delete files (and delete offline content.) It's often

recommended

that the TIF folder be kept at about 50–60 MB (Settings.)

Hello.

When I visit a particular site,

<http://www.britannica.com/dday/browse?browseId=237176>, holding

Interactive

Re: Odd behavior – no response..

Charts and Maps, absolutely nothing happens when I click the

thumbnails in

order to view the maps, ect. This problem is present on my own

desktop

PC

(win XP Sp2) and also on my fiancée's Laptop (also Win XP SP2). I

am

so

fortunate to run a desktop PC having Win XP SP 2 at work, but here

the

links works just fine. This is odd! I have tried to compare the security settings as well as the

advanced

settings in Internet Explorer, but haven't found the culprit so

far. I

also

disabled the popup blocker function, but this did not help either.

Could
