I get the following error msg when try to download a CSV file off the web and save to Excel file.

It keeps downloading onto a web page format???

"Microsoft Excel cannot access the file

<http://www.bankonlinebanking.org/account/histdownload.asp?>

This is in an error window. There is no selection of either save or run. Just an OK button which then takes me to the web page where the statement information is showing up.

I was always able to do this when I used Win98SE with no problem so thought it would be the same with XP Pro sp2.

Any help would be appreciated.....Thanks

.
