I wanted to let you know a work-around, but your not going to like it. I found out that if you take the graphics and change the path from Relative to Absolute, your graphics will show up just fine (even if they are hyperlinked to a HTML page).

Example:

Relative path may look like this:
[/files/myphoto.jpg](#)

Absolute path will look like this:

<http://mywebsite.com/files/myphoto.jpg>.

At any rate, this is not something you want to do on all of your stuff... but it does resolve the issue I was having. I have way to many of these to implement the work around but wanted to share it with you so that you can try it on one of your graphics (on your website).

Have you found the solution to this problem? I am experiencing the same problem only reversed. My website will show fine on others computers but not on my own.

IE 6 running on W2K will not let me see Thumbnail Graphics that are linked to a html file. It is my website that I've created. It shows up on my home computer but will not display on my work computer. What would cause this to happen?
