Hi Frank,

Thank you for your help but that did not work so I spent the afternoon checking to see if I could find any more about a web accelerator that mcafee had on their ad banners, I thought that might have been the problem. I also fiddled around with my belkin wireless utility, checked to see I had the right WEP key, restored to previous point etc and eventually ended up with no connection at all except to the router (I knew this as I could still access the router home page from this machine).

I re-read the booklets that came with my belkin router and network card and no dice, and thought I would contact Belkin support (Europe: 00800 223 55 460) to see if they had any bright ideas. They did. They told me to go to 'Start' then 'Run' and type 'services.msc' and hit 'Ok'.

In the services window that opened I had to select 'Services (local)' to display the contents in the right window pane and find 'Wireless Zero Configuration'. I was told to right click 'Wireless Zero Configuration' and select 'stop', something happened too quick for my eye and my connection was restored, so I opened ie6 and up pops google home page and all graphics are back to perfect quality.

Hope this helps someone else too and thanks so much for your time Frank.

Kind regards
Melanie
