Okay try this:

To adjust AutoComplete settings in IE

In Internet Explorer, on the Tools menu, click Internet Options.
Click the Content tab. Under Personal information, click AutoComplete.
Select the check boxes for the AutoComplete options you want to use.
Choose Clear Passwords. Remember this will clear 'all' passwords so backup.

Good Luck

"Greg nwtc" Gregnwtc@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

We are using Internet Explorer for the FTP. Since the password saved in Explorer is incorrect it never gives the logon box.

One of my users inadvertantly saved an incorrect password for our FTP site.
(checked save password on the Log On As window.) How can I remove that password and effectively uncheck the save password box?

Thanks

What program are you using to FTP?

Can you log in with your original password?
If so, when you upload and you enter your correct password

Re: Remove FTP Saved Password

can you highlight the incorrect password and use your delete key?
