1. Turn off AutoComplete feature.
 2. Clear IE Cookies.
 3. Clear forms & passwords.
 4. Use IntelliLogin to help login & save login forms for you.
- IntelliLogin: Auto Login for IE.

Hello,

IE Security Settings

Get Windows XP SP2

<http://www.microsoft.com/athome/security/protect/windowsxp/default.mspx>

One potential downside to securely configuring the Internet zone is that some web sites will not work properly until you add them to the Trusted sites zone, a process that some users find cumbersome and yet rewarding.

If you start to make extensive use of the Trusted sites and Restricted sites zones, you might want to download IE Power Tweaks Web Accessories, a special set of utilities from Microsoft, from here:

<http://www.microsoft.com/windows/ie/previous/webaccess/default.msp>

This set of utilities will add two new menu options to the Tools menu in Internet Explorer:

Add to Trusted Zone

Add to Restricted Zone

This makes adding sites that you want to the Trusted sites zone a cinch.

Once we're at a web site that we wish to add to the Trusted sites zone, we can just use the Add to Trusted Zone menu option.

Although the IE Power Tweaks Web Accessories is billed as a tool for Internet Explorer 5, it will work just fine on Internet Explorer 6 as well.

Keep your operating system and programs patched

You are strongly advised to apply all security-related patches for your software as they become available.

You can use the Windows Update and Office Update sites to keep your system up-to-date. Note that they work with Internet Explorer only. You may have to lower your Internet security settings in order for them to function correctly. Don't forget to set your security preferences to a higher level again when you are done.
