Hello Annemarie,

I use their SpamBlocker feature. However I've never downloaded and installed the add-on into IE6 nor IE7.

From EarthLink Webmail, I set the SpamBlocker to the highest setting that

blocks ALL incoming email. Once a day, I'll receive a report listing the email sitting in my online "suspect email" folder. If there is anything in the list I want, I go to their Webmail website and move the email from the "suspect" folder to my "inbox" and have the contact added to my allow list (if I want). Then I do another send-and-receive via outlook express to get the mail.

Works great for me, I spent a little time up front adding family and friends to the allow list, but from there out it's a no brainer. Sure does solve the Spam Mail problem for me.

Love it...

I suppose the add-on you refer to installs a "webmail" toolbar to IE6/IE7. Maybe you could save the webmail page (where you would logon) link into your IE favorites adding it to the "links" folder. If the links toolbar is turned on, you should see it amongst your IE toolbars. Click to open the links drop down menu and find your link to the web page. When you logon, have XP remember your password if you want.

That pain you refer to can be made less painful!

Richard in VA.

## Re: Earthlink users

Anybody using the spamBlocker add-on from their Outlook Express:  
Earthlink  
just informed me that their programmers have to work on making spamBlocker  
add-on work with IE 7.0 There should be a fix available soon (I hope!).  
In  
the meantime, it's just inconvenient, but you can still access suspect  
mail  
through the main earthlink.net webpage. Just a pain!
