Hi Ricky,

I tried this solution and it did not work for me. My " Allow Active Contents" were, " to run in files on My Computer" or "from CDs to run on My Computer". I tried checking both of these, but it did not work. I have turned blocking off on IE, and Yahoo! and still can't get it to allow certain popups. Example: Launchcast. I'd appreciate your help if you can. Thank you.

"Ricky" wrote:

Try going to internet options..advanced tab..scroll down to security and put a check in Allow Active Content to Run in My Computer and see if it helps.

Hi Jan II, thanks for your response...

I know what you're saying, and true, an icon does appear on the status bar on websites with automatic popups (as in this one for example)... I did right click on it and apparently disabled it since the popups open on this site now... but again, it doesn't do it for offline websites... to be more specific, those website that I have built and saved in my PC. As soon as I open one of the sites from C:// the status bar does not show the popup thing, but the warning message and an extra bar appears at the top (under the URL) that says "To help protect your security, IR has restricted this file from showing active content that could access your computer. Click here for options" ... that's what I get on all my sites now, and I have no active content, unless you call a simple javascript popup active content, which it

Re: How can I get rid of the popup blocker with SP2???

isn't.

One of the options that I get is "allow blocked content" which I select and the message bar goes away... allow me to remind you that all of this is happening with the popup blocker turned OFF... then I click on a thumbnail to expand a
