i have got an ASP.net 2.0 seb site that generates pages that are full of <DIV> tags and IE7 does not like it, i basically get a blank page, IE6 displays it fine. this is an important application and we really want to deploy IE7, so i need a quick fix, any sugestions?

Step 1: run the HTML and CSS validators to see if there are any errors in the code.

<http://validator.w3.org/>

<http://jigsaw.w3.org/css-validator/>
