I have done this trick. Sorry, it had no effect.
 I wonder if anybody knows where in Registry "Save as..." shell option is controlled.
 I believe that something in HKEY_CURRENT_USER is wrong because other users have no such problem.
 Let me know please.

Try this:

Enable or _Disable_ Right Click Context Menu (Line 56, Right)
 (See instructions for REG files at top of page)
http://www.kellys-korner-xp.com/xp_tweaks.htm

Download both files (contextmenu.reg and contextmenuundo.reg).

First run contextmenuundo.reg and reboot, then run contextmenu.reg and reboot. The first should remove all options from the right-click context menu; the second should bring them back, hopefully including the Save As option.

I cannot save file from any Internet page
(using right–click on the
link
and
"Save as..." dialogue).
Instead of "Save as..." dialogue I see my
Desktop in Explorer window!
Other users (log–ins) on this computer do
not have the trouble.
How it can be troubleshooted and restored to
be in order?
