Hi Mark,

I've run out of ideas.... well one left... try pressing refresh (Ctrl+F5) while you are waiting for paypal to load. The routing from your location to the locations where paypal is sending content (different domains are used to provide content and certification) may be obtuse and some content is timing out.

Also check that on the Advanced tab of Internet Options you have

User SSL 2.0 and Use SSL 3.0 checked. (I have Use TLS 1.0 unchecked)

(the above are listed as possible causes on the "Cannot load Page" error message)

Regards.

No special blocking file that I know of. And Privacy setting is Low.

"Rob ^_^" wrote:

Hi Mark,

Are you using a Hosts file? or Firewall/Productivity control.... something

that may be blocking content.

(I don't think this is a high probability.... it looks like this image is

a

tracking cookie in disguise)

What about your Privacy settings. Tools>Internet Options – Privacy tab. I have a Medium setting, which works.

When I view the Privacy Policy report (View>Web Page Privacy Report) I see

Re: Blocked Content on PayPal, other sites

two accepted cookies from PayPal)

I am crossing my fingers that this is it.

Regards.

I think we're getting closer. PayPal Certificate says "Issued
by
Verisign
Class 3 Extended Valiation SSL SGC CA. Valid from
1/29/2007 to
1/29/2009"
So this is current. Even so, I went ahead and Installed
Certificate and
was
told Import Successful. Yet the persistent problem continues
to be
that
PayPal site and all subsites hang up for several seconds
noting at
screen
bottom: "(1 item remaining) Downloading picture
<https://extended>
validation
-SSL.verisign.com/dot_clear.gif ... " So is it a picture that's
the
problem?
Very mysterious. Never had this problem with any other site.

"Rob ^_^" wrote:

Hi Mark,

I am located in Australia, and I get
redirected to the Australian site
for
Paypal when I login. But the site certificate
for the Australian site
loads
fine. It was issued on 30/1/2007, which
should be the same certificate
for
all their sites.

When you go to paypal, select the
File>Properties menu item. At the
bottom
of that dialog you will find a Certificates

Re: Blocked Content on PayPal, other sites

button... click it to view
the
site Certificate properties.
In IE7 you can also click on the Padlock
icon that appears next to the
address bar to view the Certificate
properties. (If you don't have a
padlock
icon, and your anti-phishing filter is turned
off, then you are not at
the
real paypal site)

On the General tab, there is a button to
Install Certificate.... this
will
update any local copies that you have of
their certificates. I am
thinking
that you have previously installed their last
certificate prior to
30/01/07
(their last issue date)

I trust that you have used Paypal before and
have not clicked on any
links
passed to you in an email. I can access the
site just fine and I am
worried
that you may have been redirected to a
spoofing site.

Regards.

Yes, I do have IE 7. But I
see no security globe icon.
So I went
into
Tools/Internet
Options/Security/Trusted
Sites/Sites. As you say,
PayPal
is
ready to be placed into
Trusted. I did this. I also
first left

Re: Blocked Content on PayPal, other sites

checked
and
then unchecked "Require
server verification for all
sites in this
zone."
Either way, problem
persists. It's as if when I go
into Paypal
site,
there's
one download that hangs up
the complete load for a few
seconds, then
finally
it loads, and the security
certificate error pops up.

Hi Mark,

IE version
(sounds like
7)?

When you
navigate to
Paypal,
double click
on the
security
icon
(globe
icon)
on the
status bar.
This will
open up
Internet
Options at
the
Security
tab.
Click on the
Trusted
Sites icon
(Tick) and
then press
the Sites

Re: Blocked Content on PayPal, other sites

button.

PayPal
should
already be
listed, ready
to add to
your
Trusted
Sites
zone.
Press the
Add button.
Done... the
default
security
settings for
the
Trusted
sites zone
should be
sufficient to
view PayPal
without the
Information
bar
appearing.

Regards.

When
I
go
into
PayPal,
I
get
toolbar
message
on
top
that
says,
"Internet
Explorer
has

Re: Blocked Content on PayPal, other sites

blocked
this
website
from
displaying
content
with
security
certificate
errors."
When
I
choose
"Click
here
for
options,"
then
"Display
blocked
content,"
it's
fine.
Is
there
anyway
to
prevent
this
message
from
popping
up
every
time
I
go
to
PayPal?
I
have
seen
it
on
some
other
sites,
but
my
main
interest

Re: Blocked Content on PayPal, other sites

is
in
eliminating
this
on
PayPal
since
I
go
to
it
often.
Please
advise.
Thanks.
Mark
