Working on a client's help desk I received this problem.

A highly skilled user has reported that the download panel no longer appears when downloading or trying to download a file.

I've searched Google, Yahoo, MSN and can't find any method for re-activating the download panel.

I don't know whether it's an Internet Explorer, Windows Registry, or some other feature or control.

Does anyone have an answer? Thanks.

Richard from Chicago, IL USA

What does happen?
Nothing?
The file downloads?
The file displays?

Re: Download Panel has Disappeared

IE crashes?
Something else?

Do not send mail.

Frank,

According to the user, absolutely nothing happens. The file certainly doesn't download. Nothing displays on the screen. IE does not crash but neither does it display the download window as usual. Does that help describe the situation? Thanks.

Richard from Chicago
