Please ignore. I realized right after I posted this I ended up in the wrong forum. I apologize for the inconvenience. Is it possible for someone to delete their own posts?

"GTifeld" wrote:

Hi,

I'm trying to export messages from OE6 and am getting the following error message:

"The Export could not be performed. An error occurred while initializing MAPI. "

I searched for a solution online and found a document instructing me to change the default email program from OE to something else. I followed the directions to the letter, but no luck. The same exact error appears when I try to export. The person I'm trying to do this for has several different identities in OE and the problem happens in each one. Any ideas?

Thank you in advance.

Regards & Happy Holidays,
