Try microsoft.public.isa.clients and/or microsoft.public.isa.configuration newsgroups instead.

Hi All

I'm having a problem with HTTPS when going via ISA. ISA is configured as a single NIC configuration, listening on the default port, 8080.

The browser is set to proxy to the ISA on port 8080 and "Use the same proxy server for all protocols" is selected!

HTTP will proxy ok but HTTPS will not. I can see HTTPS connections being denied on the firewall from the client.

IE 6 Has all the latest security patches installed.

Has anyone seen this before? If so, were you able to fix it? I would appreciate it if someone could suggest fix for this.

Many thanks to anyone that can help.
