Hello Wandering, it's been a long time. since I, again, have the same problem of files stuck in the outbox and never get sent out, I thought I'd ask you about the "Pegasus" email client. You said:

<<I don't use OE for email. I use Pegasus, one feature of which is a nice ability to do mail merge, and customize each letter, thus sending out a batch of individual emails. It's full of lots of other fine features, and free. (v4.41).>>

Is Pegasus function the same as OE? Do you know whether it allows to send to multiple names without the restriction harassment? I suppose I should go to their website, and I will, but thought you might be able to fill me in with info I might not find readily in their site? I don't need mail merge but hope they are better on multiple send outs...

Thanks so much for any help on this. Adela

I am beginning to form a clearer picture of what you are trying to accomplish. Ten years ago, it would have been much easier. Today there are many spam laws, and ISPs are all afraid of running afoul of them so they take a variety of measures they see as preventative. Mostly for folks with large mailing lists it turns out to be inconvenient.

A while ago, I had need to distribute to a list of 120 names. Fortunately it was a short-lived project with only a few mailings. In any event, while my ISP managed to digest it well enough, about 1/3 of the recipients found my message in their spam box and another third had a warning added that it might be spam. Simply because I sent to so many.

Yet, another friend mails several times a week to a list of about 250 with about 125 in the To: field and the rest in the CC: field. I don't like this because in the end they are sending their list of names to everyone on the list. Who knows what use they will make of it. At

Re: SORRY...forgot to add...

Re: SORRY...forgot to add...

least one has already spammed it.

I don't use OE for email. I use Pegasus, one feature of which is a nice ability to do mail merge, and customize each letter, thus sending out a batch of individual emails. It's full of lots of other fine features, and free. (v4.41).

There are many other bulk mailing email programs out there, many of which may have the capability to bypass your ISP mail server (smtp). I think it means Simple Mail Transfer Protocol) Many ISP's don't allow that, as mine is one, so I send all mail through their server.

Your incoming mail box is your POP server, (Post Office Protocol). They are actually different computers in many cases.

You will probably continue to encounter a series of problems with large lists, and using standard mail services it is only likely to get worse in the future. My only advice is patience and smaller lists.

Please be sure that those you mail to actually want you to mail to them, or you may run afoul of spam laws or rules of your ISP. More than one I know has been shut off for what the ISP considered spam.

Have fun, and consider it all an adventure designed to prevent your days from becoming peaceful and dull. :)

Again, Wandering to the rescue! Thanks SO very much! You say
interesting

things but I'm still not well informed about those smtp's, pop's,
etc. I

hope someone knows! LOL! All I know is that my servers and OE are
blaming

one another for this problem, but they aren't the ones who suffer
this bad

inconvenience...

Re: SORRY...forgot to add...

Re: SORRY...forgot to add...

The YahooGroup is another story. I did create a group for one of my identities, the largest one...but only 23 people of my 240

subscribed! And

precisely this morning I re-sent them an invite...so 2 more

subscribed! I

guess people don't like the pain of subscribing (I hate it too). I

wish

Yahoo just let us send our messages to their maximum allowed without tormenting the recipients with subscribing, etc....

I was waiting to complete this large list at yahoo so I could do the

same

with my other 2, smaller lists, but it seems I never finish

completing the

first one! :o) I'm extremely disappointed in the internet – what

good is

it if there are so many interferences??? At least in the past with

the

electric typewriter (yes I go way way way back) ;o) whenever I

decided to

reach a number of people, I'd just type the names, then only one

letter

which would retype itself many times and yes, while it was a little

more

work (and noisy LOL!), at least I KNEW the letters got sent out

period. Not

in the internet not, here one never knows if and when they'd get

out, to say

Re: SORRY...forgot to add...

Re: SORRY...forgot to add...

nothing of the .extreme aggravation and time consuming! Sigh! I
thought
some of the MVP's would help. You'd think OE would take a little
more
responsibility?
However, without having to wait until my large YahooGroup list is
complete
and ready for me to send out to all 240 names, I wonder if I could
send them
from my yahoo email, without the group. Not sure but I'll certainly
try,
even though I don't like the web based emails. What do you think?
Again my good friend, thanks so much for your usual useful comments
and
suggestions! :o) Adela

Hello,

These messages are not very friendly, are they? Nor do they
always
reflect the actual problem. It seems, and I may be wrong, that
your
smtp (outbound mail) server is complaining that the
receiving
(POP)
server felt it was getting too many messages that hour for
that

Re: SORRY...forgot to add...

Re: SORRY...forgot to add...

person. Since it is just the one message, I don't think it is

your

server complaining, and of course, we have no way to know how many your friend is receiving, or how many they are allowed in each

hour.

Sometimes some ISP's block others. For instance a number have

blocked

my ISP Comcast. Often the receiving person can spend a lot of time

on

hold and eventually get the block removed, and sometimes they

cannot.

For quite a while I couldn't email my church from Comcast – Now I

can.

In the meantime I used my yahoo account.

I think I would just try that again later, and if it is rejected

then,

I'd just see if I could send from an account like yahoo. It is a great idea to have such an account in any event, and it's free. I

use

it as my trash collector, mostly. When someone I am not sure of insists on a valid email address, as many websites do, I give them yahoo till I see how it all goes. They have great spam filters,

and I

Re: SORRY...forgot to add...

Re: SORRY...forgot to add...

don't have to deal with much crud. I don't use a spam filter at

all on

my comcast account because it is so seldom out there.

Anyway, good luck. Sometimes with email, you just can't get there

from

here. And by the way, the email address I use on the newsgroups is

not

valid. Too many eyes scanning this.

"Adela" <nuevadel2@xxxxxxx> wrote in message
news:vZWdnbtTWc6SoAzbnZ2dnUVZ.qqrnZ2d@xxxxxxxxxxx

...that I keep my entire computer, especially
OE, with all

updates

up to

date. When I click on Send/Receive I get this
msg all the time:

<<The message could not be sent because
one of the recipients was

rejected

by the server. The rejected e-mail address
was '@earthlink.net'.

Subject

'Fw: Sunday July 22nd 2pm Soho NYC',
Account: 'pop.rcn.com',

Server:

'smtp.rcn.com', Protocol: SMTP, Server
Response: '452 Too many

recipients

Re: SORRY...forgot to add...

Re: SORRY...forgot to add...

received this hour', Port: 25, Secure(SSL):
No, Server Error:

452,

Error

Number: 0x800CCC79>>

This: <<Server Response: '452 Too many
recipients received this

hour',>> of

course is NOT true. As mentioned below,
the highest number of

names

I have

is 240, and right now between the 2 msgs
stuck in each identity

are

only a

total of 208 names!

I anticipate my thanks again for a helpful
reply. Adela

Subject: MS MVPs are specialists in
OE...pls. help???

(WinXP Home SP2; OE 6; IE 6; Dell
Dimension XPS T450MHz Pentium

III;

AVG;

Re: SORRY...forgot to add...

Re: SORRY...forgot to add...

spybot S&D; ad-aware; cable;
WordPerfect8; Lexmark Laser printer

"Opra

E310")

Hello...yes, I understand that the Microsoft
MVPs (Most Valuable
Professionals): Frank Saunders; Jim
Pickering; Paul Berkowitz and

Tom Koch

specialize in OE technical problems so I
appeal to them now.

I've

tried

just about everything and am at the end of
the rope. Here's the

main

problem:

I have 3 identities, and in all of them the
msgs just do not get

sent out

ever! They remain in the outbox until I get
tired and delete

them.

(It

started in only one identity, then two then...)

#1 identity has 101 email names to which I
need to send messages.

#2 has

107 names, and #3 has 240 names. I rarely if
ever send mgs to

Re: SORRY...forgot to add...

all 3

at one

time...

Right now #1 has a msg stuck in the outbox
for 3 days sitting

pretty. #2,

stuck in the outbox since June 5!!! #3 will
send them out IF I

split the

email names into 25 or 50 names per hour,
so it takes me several

actions and

a lot of time to send just ONE msg. My
servers told me I'm

allowed

to send

to 400 names all at once per hour...but OE
won't send even 100

per

hour!!!

I deleted my 3 identity account settings and
re-established them.

Had my

servers check the modem and a number of
other tests and

everything's ok at

their end. I was told to delete and renew the
outbox AND send

folders. I

Re: SORRY...forgot to add...

Re: SORRY...forgot to add...

did. Nothing happened.

Recently I had my hard drive wiped out completely and reinstalled

winXP and

all the other programs, including OE6. I thought surely now it

will

work

properly...WRONG!

So...what else is there to do in order to fix this OE sickness???

I

read

all the Microsoft (and other publication) articles on the matter

and

nothing

worked. Would the special MVPs help me to clear this problem

please?

My deepest thanks for ANY help! Adela
