Hello everybody

I have downloaded the files as advised by

<http://www.broomeman.com/support/wsiedown.html> and burnt them on a CD. My

purpose is to update my wife's notebook (Windows Me) which is running a good old lazy modem... I am stuck to this step: the files are copied onto the notebook in a "downloads/internet explorer 6 sp1" directory. What do I have to do to install it now ?

Thanks in advance.

Herve
