Robert −

Correction to my post above.

Entering "ping −n 1 etax.dor.ga.gov" at a command prompt returns "unknown host etax.dor.ga.gov" should have said 'Entering "ping −n 1 etax.dor.ga.gov" at a command prompt returns "request timed out".'

Thank you.

Tom Gunby

It may help to describe in detail what the symptoms are.
E.g. "unable to access" is extremely vague and could entail
a problem cause which has nothing to do with IE but more to do
with the OS networking functions such as DNS

E.g. a workaround might be as simple as: before trying to open that

page

switching to a cmd window and entering:

ping −n 1 etax.dor.ga.gov

Hint: do an ipconfig /displaydns and a right−click Find for etax
before and after the above command to see why it might be helpful.

Good luck
