Thank you, Steve!  
I'll have a look if I can use your informations.

Best regards,  
Marc

You can save the draft message to the desktop and edit the header in Notepad  
and save it back again and then send the message. The problem when you do  
that, is that OE changes all the header information again and what you  
changed won't stick.

The only way to do this is to hack the message in the outbox prior to  
sending it, and you don't want to go there.

steve
