Open Windows Explorer.

Go to Tools | Folder Options | File Types.

Scroll down to URL:HyperText Transfer Protocol and select it.

Click Edit or Advanced, depending on your Windows version.

Select 'open'.

Click Edit.

1. "Application used to perform this action" should read:

"C:\PROGRAM FILES\INTERNET EXPLORER\iexplore.exe" -nohome
(Check the path to iexplore.exe to make sure that is correct and use the
double quotes.)

DDE should be checked and in the boxes below it you should have:

#1:

"%1",,-1,0,,,

#2

IEExplore

#3 (blank)

#4

WWW_OpenURL

microsoft.public.windows.inetexplorer.ie6_outlookexpress: Re: Hyperlinks in Outlook Express

URL:HyperText Transfer Protocol with Privacy should be the same.

Sometimes it is necessary to uncheck Use DDE.

If that doesn't fix it, go to Start | Run and type

regsvr32 urlmon.dll

2. For small windows:

Open such a link.

Don't use the maximize button.

Stretch the edges/corners so that the window fills the screen.

Close all other IE windows.

Close the stretched window.

If none of this helps please post back in the same thread.
