Is there any way of downloading only the message headers from the POP server using OE? I receive some 80-100 virus-infected messages with lengths ranging from 20 to 100 KB each, and this would save me a lot of time. Ultimately I would like to be able to mark which messages to delete on the POP server before downloading the messages in their whole (just like the little Email Remover program). Do you know any plug-in program integrating with OE to do this?

Thanks in advance.
