Everytime I recieve an email, it says that I recieved it 1 hour prior to when I actually recieved it. The servers that house our email are on the eastern time and we are in central time. However if I send something to myself, all of the times are in central time, but it seems that Outlook Express adjusts the time to Central time.

I did change my time zone on my computer to Eastern time zone but kept the time in Central time and then it seems to work correctly. But once I set my computer back to Central time zone and put it back to Central time, it does the same thing.

Any suggestions?

Thanks in advance!
