We really have a problem here. I tried to send a test message to this email.  
I received the following:

The message could not be sent because one of the recipients was rejected by the server. The rejected e-mail address was 'pequeña79\_@hotmail.com'.  
Subject 'Esto es un test', Account: 'xxxx', Server: 'yyyyy.com', Protocol: SMTP, Server Response: '553 5.1.3 syntax error; address cannot contain 8bit characters: pequeña79\_@hotmail.com', Port: 25, Secure(SSL): No, Server Error: 553, Error Number: 0x800CCC79

So maybe the wizes can interpret this better than myself.

hope this helps,  
haim

Hello,

I have tried both methods. First removing the Tilde symbol. It is sent but comes back as Mailer-Daemon, (hotmail does not have this address) Second, even when I type out the email pequeña79\_hotmail.com it still gives the same error message. Could it be something else.

Brian
