> *I am trying to understand what Synchronize All means*

Synchronize *all* accounts with whatever synchronization method is specified for each newsgroup. Also does Send/Receive on all Mail accounts. Keyboard shortcut: Ctrl-Shift-M (also available by toolbar button)

You may be able to use it to simulate either Synchronize Account or Synchronize Newsgroup (thereby avoiding the checking for Watched threads problem) by temporarily changing the synchronization method for all the other newsgroups to None.

> *How did you find that google link?????*

Google Groups Advanced page. Allows date range specification. E.g. June 30 2004 – June 30 2004. I also used it to give the other criteria that I normally would have typed immediately:

insubject:embedded insubject:pictures group:microsoft.*.outlook

The Advanced page generates that syntax for you. Using the date range eliminates a few other threads having similar Subjects.

HTH

Robert
