Hi Peop's

I've noticed since updating XP to SP2 that if i start OE without a live web connection it announces that an unknown error has occurred, previously it would announce that it was now working offline.

Is this a known issue, it causes no other problems, just seems a bit 'untidy' to me.

It seems also that OE still wont remember the user assigned path for saving attachments, this i believe was something that broke in a previous SP1 update?, any updates on this issue please.

Thanks for your time peop's.
