Hi Steffo,

I'll check with sources available to me in an attempt to find the answer. A follow-up will not be possible for about 12 hours, however. Someone may be able to help sooner.

Another follow up = I'm using my old PC right now and there are no problems
with Hotmail at all.

Could it be the Windows Spyware Beta program blocks my OE/Hotmail syncro?

I don't have that in the old PC but I installed it in my new one.

Is there any setting I should change/check?

Thanks.
