Did you post from the machine in question? This is default secure behaviour in a fully updated version of WinXP SP2 when you attempt to Drag and Drop a link from OE (Restricted Sites) to IE (Internet zone). By default OE runs in Restricted Sites zone.

This setting is controlled in IE Tools>Internet Options>Privacy>[zone]>Custom>Miscellaneous.

Additional restrictions to Drag and Drop were introduced in MS05-008 and MS05-014 (Feb-05).
