The actual error message is as follows:

Your server has unexpectedly terminated the connection. Possible reasons are network problems, inactivity. Account 'xxxxxxx' Server 'smtp.mail.yahoo.com', Port 25, SSL No, Error Number '0X800CCC0F'

I know there are no network problems with my router, or compters on my end and it cannot be inactivity on my end. So my best guess is a yahoo problem. However this has been happening for 2 days now. We have notified Yahoo this morning, and up to this point got no response from there.

Is there anything else i can check on my end? I have done everything i can think of

- 1) Deleted account and re-entered it
- 2) Confirmed settings
- 3) Tried account on another computer

I still can receive e-mail with this account, but still cannot send with this account which seems strange.
