I have my old email folders saved on my new computer, but I can't seem to get them where they need to be – I have tried the directions posted on this website:

<http://www.insideoe.com/faqs/how.htm#importOE5>

as I was instructed to, and I still can't get the folders to move – they are all marked "read only" – they are all made with IE6 (which is the same as I am using now) – I am running WinXP and on a Dell –

I would appreciate ANY help – I need to access these files...
Thank you so much!
