Did you create the folder first before moving the store? I've just used D:\Mail as the folder for my mail for years and never had a problem as you describe. Do you have an antivirus/antispam program screening incoming mail messages? If so, disable it and see if that fixes the problem. Also, please provide the exact and complete text of any error message you may be getting. The details of the error message are quite helpful in determining the exact nature of the problem.

Also, it's important during an upgrade to completely shutdown any antivirus program to avoid corrupting the installation/upgrade in question.

It is on a local drive. I moved the 'Outlook Express' folder from:

```
C:\Documents and Settings\corbin\Local Settings\Application
Data\Identities\{C2551CD5-AD57-4D7B-9056-D62143F16169}\Microsoft\Outlook
Express
```

to:

```
C:\Documents and Settings\corbin\My Documents\Outlook Express
```
