Have you disabled E-mail scanning within Kaspersky?

I use "Kaspersky Anti Virus Personal"

"Frank Saunders, MS-MVP OE"

Open your anti-virus and turn
it off there. We have no way
of knowing what anti-virus you
use. Scanning email with ANY
anti-virus is useless and is
apt to cause various problems,
including what you describe.

Pop3 accounts will use the same Drafts, Inbox, Outbox, and Items. Use a new Identity to have separate folders.

Check the account settings.
Turn off virus scanning of email.

I just create a new account in my OE (ex. B account),and as default I set my account (A account),I got account,anybody know how to display B account? here from B account report trouble "Your server has unexpectedly terminated the connection causes for this include server problems, network problems, long period of inactivity. Account: 'pop3.telkom.net', Protocol: POP3, Port: 110, Security: 'pop3.telkom.net', Error Number: 0x800CCC0F"
