OK – it does sound very much as if you may have malware present!!!
You may already have a virus/spyware hijack

download the Stinger from here and run it to make sure that A–V–disabling viruses are not present on your PC
<http://vil.mcafeesecurity.com/vil/averttools.asp>

– update your virus scanner and run a full system scan of all files.

Reboot to Safe Mode and run CWShredder – to remove variants of the CoolWebSearch hijacker.
<http://www.merijn.org/cwschronicles.html>

Use CWShredder, the removal tool:
<http://www.trendmicro.com/cwshredder/>

download AdAware SE Personal Edition from www.lavasoftusa.com, install, update, and run it to remove spyware, adware, and other such nasties from your system.
