Use MVP Steve Cochran's OETool to examine the source code. It's a one button click with the Views bar enabled.

Plus, did I mention that it's free?

"Charlie Tame" <charlie@xxxxxxxx> wrote in message

I have been told CTRL F3 only works with the
preview pane turned on Larry,

That kinda defeats the point then, if I can already see the message in the
preview
pane. I was looking for some way to inspect emails without using the
preview
pane, and without being limited to plain text only.

... and it's not dangerous with
HTML like it used to be so there's no reason not to use it.

There are some messages I want to view in HTML so I would like
to keep
that option, yet if I open an email that has an image which is

Re: Shortcut for Message Source?

referenced
from
the web, the fact that I requested the image lets them know I
opened the
email.
Viewing the source lets me see the message without any sort of
call back to
the
originators...

Oh well...
Thanks for the replies!
