If you want further assistance, reply to one (1) and only one (1) of your previous threads here.

HI, well, I have spent the last week trying to fix or repair my Outlook Express connection. Here is what I did in conjunction with help from my ISP. I removed and reinstalled IE6 and Outlook Express, used every antispyware proggy known to get rid of all that junk. I formed a new identity, changed all the dbx etc. files to negate that possible problem. In other words, all that can physically be done to eradicate this error, the 11001 port and the other one, please don't ask me to look that up again, as I would have to go way way back, haah!

So, bottom line, none of it worked. I am still getting the error message when Outlook Express tries to connect but I can hit Send and Receive and it works, and stays working until I shutdown and then it occurs as soon as I go online again. Personallly I think it is on my ISP end, something causing the port to close when going to check new messages. They say it isn't but how can it be my computer? My experience is when these routings or rootings get established they can't be changed unless a complete wipe of hard drive or some other drastic measure is taken. So, last appeal, my OS is Windows 98SE, I connect via modem. If you can come up with some other method I need to be making then please direct me. Also, thanks for all the assistance, much appreciated, Derek
