I have been reading with intrest the emails between "Curlee cues & Bruce". Trying to find how to sort the problem OE has caused me. For no apparent reason two wks ago my OE stopped sending emails, then it also stopped receiving them. Most of the problem appears to be with the dial up Password.

I have been through all the trouble shooting info I can find with Pbtinternet.com & yahoo.com plus OE, but am still without email. I can connect to the Internet. but any other connection is Nill. Logon or Error Message is as follows

Problem logging to server. Password rejected Account Mail BT.com server.mail bt.Protocol. POP3 server respond-ERR errorlogging in. Please visit <http://mail.yahoo.com>. Port 110 secure(SSL) no.server error 0x800ccc90 errorno.0x800ccc92.

Can anyone HELP please
Many Thanks
Lilac,

PS. I also got a new error while trying to send email via yahoo just now. it said something about not being configured to send email with OE. sorry but didn't manage to get it all.

Unlike SBC Yahoo! DSL Service (which is now called, "AT&T Yahoo! HSI"), BT Yahoo! won't let me access the help files without logging in. Obviously, my SBC Yahoo! login won't work. So I don't know what your mail servers should be. BT Internet should have given you the BT Yahoo! mail servers.

What I do know, from my SBC Yahoo! experience, is that accessing the mail servers _requires_ authentication. In MSOE, you would go to your account properties, to the servers tab, and check the relevant boxes for "My server requires authentication". But DO NOT check the "Log on using Secure

Re: OE has stopped sending & receiving

Password Authentication" box. That is not the same thing as server authentication; it is some kind of MS Exchange feature, and it does not apply to the Yahoo! email servers.

You may be required to use your full email address as the log in name. It is that way for SBC Yahoo! DSL Service.
