Thanks again for your help, but I already had tried setting the default Program Accesses with no luck. In regards to System Restore, I have never been a fan of System Restore. I found it to be a space hog and to fail when it was most needed. I have it turned off. I keep periodic images of my hard drive with True Image and if all else fails I will restore a good image.

Thanks,
Bill

Go to Control Panel | Add / Remove Programs | Set Program access and defaults and set IE and OE as default. See if that fixes it.

Having exhausted all suggested solutions and the problem still existing, I thought that maybe some registry editing may solve my problem. As mentioned, when I click on a hyperlink in Outlook Express, "My Documents" opens up. Having made all the suggested changes in "File Types" and still no resolution, I am trying to find the registry keys that effect what happens when one clicks on a hyperlink. Maybe a change in the registry will fix the problem. Having read a lot of posts in this newsgroup, it appears that this is a problem with several posters who still have not found a resolution to the problem using the information that was provided. It is evident that some other solution is needed. I do not want to poke around the registry randomly so I hope that someone can make a suggestion as to where to look and what keys to check.

Regards,
Bill

Bruce,

Thanks for your help. I have spent the better part of this afternoon working on the solutions that you posted. However, I got only partial success. My computer has three user accounts, one for me, my wife and my son. After doing all that you suggested, I opened OE and clicked on several hyperlinks and got the web pages. I was all set to celebrate. I decided to check the other two user accounts and opened up my wife's and then my son's. Each time I open OE in their accounts, I clicked on a hyperlink and either got no response or "My Documents" opened up. I then went through all the procedures that you gave me for the other two user accounts and all the settings were as they had been set under my account. No changes were necessary. The only problem that I had encountered in running through the solutions was in trying to register Mshtml.dll. On all three accounts, the Mshtml.dll would not register. The error message advised "Mshtml was loaded, but the DllRegisterServer entry point was not found. This file can not be registered." I do not know if this is significant or not. As mentioned, I resolved the problem under my user account, but not under the other two. I saw another posting by you in regards to another individual having a similar problem as myself. It was suggested that the identity in the account may be damaged and creating a new user account was a possible remedy. I would think that this may be an option for me and will try this later today unless I find an alternate solution. Again, thank you.

Regards,
Bill

If this did not work:

From:
<http://www.fjsmjs.com/OE/nolinks.htm>

If nothing happens when you click a link:
Open Windows Explorer.
Go to Tools | Folder Options | File Types.
Scroll down to {NONE} URL:HyperText
Transfer Protocol and select it.
Click Edit or Advanced, depending on your
Windows version.
Select 'open'.
Click Edit.

"Application used to perform this action"
should read:

"C:\PROGRAM FILES\INTERNET
EXPLORER\iexplore.exe" -nohome
(Check the path to iexplore.exe to make sure
that is correct and use
the double quotes.)

DDE should be checked and in the boxes
below it you should have:

#1:
"%1" ,, -1,0,,,
#2
IExplore
#3 (blank)

#4
WWW_OpenURL

URL:HyperText Transfer Protocol with
Privacy should be the same.

Sometimes it is necessary to uncheck Use
DDE.

Try this next:

Start>Run> type, or Copy/Paste, these in one

Re: OE Hyperlinks do not work

at a time and try again.
(Note the space in each command).

```
regsvr32 Mshtml.dll  
regsvr32 Oleaut32.dll  
regsvr32 Shell32.dll  
regsvr32 actxprxy.dll  
regsvr32 shdocvw.dll  
regsvr32 urlmon.dll
```

In IE, go to: Tools>Internet
Options>Programs. Click: Reset Web
Settings – (uncheck box for homepage) –
Click Yes.

I made a mistake when
looking at the file types.
Upon opening it, I
immediately dropped down
to the URL, since that is
what appeared in the
Knowledge Base article. I
found the file types for File
Transfer
Protocol, Gopher Protocol
and Hypertext Transfer
Protocol. They all had
the proper associations for
Internet Explorer. I am
perplexed as to
why clicking on a hyperlink
will open "My Documents".

Re: OE Hyperlinks do not work

In "URL:
Internet
Shortcut",
URL is the
file
extension.
This
actually
refers to
favorites
which are
*.URL files.

For the
various
"URL ...
Protocol",
etc. these
have No file
extension,
since they
aren't files.
Assuming
that you
have the file
associations
sorted by
extension
(click on the
column
heading to
sort
on that
column),
these will
be at the top
of the list
with the
"(NONE)"
file
extensions.

I
installed
a
program
called
Lightshell
from
<http://www.labyrinth.net.au/~mosses/rob/>.
Did
not
care
for
it
and
uninstalled
it.
From
there
my
problems
began.
I
found
that
the
WindowsXP
shell
had
been
somehow
damaged.
The
icons
and
taskbar
would
not
show.
Internet
Explorer
would
not
open
a
web
page
and
