It's important to know the Details. When you get an "Illegal Operation" or "encountered a problem" message, there is usually a Details button (In WinME press Alt/D), or a "click here" link to see the error report. When you click on the button/link, it will give a message like: XXXX caused an error in YYYY and a bunch of register nonsense or it will list the Appname XXXX and Modname YYYY. The XXXX and YYYY are important to identify the cause and solution. You can ignore the rest of the message.

Also include operating system that you are using and your version of Works.

Maybe you have a variation on this:

Error Message: MSIMN Caused an Invalid Page Fault in Module...MSCONV97.DLL

(Paste into to a HTML mail message)

(MSIMN caused an invalid page fault in module <unknown>)

<http://support.microsoft.com/?kbid=175361>

The Microsoft Internet Mail and News and Outlook Express programs do not come with a spell checker. They will use the spell checker from any of several Microsoft 32-bit (Win95/98/NT4 specific) programs. If using Works 4.0, a registry change is required. The Works 7+ spell checker is not compatible with Outlook Express. There are also some freeware/shareware spell checkers that may work (see the URL in my signature).

For Office/Word97 on WinXP, this seems to be the common cause:

Restoring csapi3t1.dll file

I can't copy paste between a works word processing document and OE6
reply
email without an error message saying it has to close
also no spellcheck

.
