It seems that it solved the problem.
Thanks. Craig

Thank you. Upon reading your response, both scanning incoming and outgoing emails were unchecked.
Craig

You're welcome. Did it solve the icon in the systray problem?

Disable Norton's email scan
as it offers no added
protection and can
cause problems with OE.

Could you please more specific on this line?
I have been using NAV
for zillions of years. I always thought that
NAV protected almost
everything because I have a blind trust in
NAV somehow. I am

Re: New email icon in system tray

surprised to see that it does not protect.
Please enlighten me.

Craig

I wrote *added* protection. If you were to try and run a virus, NAV would still stick it's head out and stop it. It's just that OE and NAV don't work together well and even Symantec says it's not necessary:

<paste>
Disabling Email Scanning does not leave you unprotected against viruses that are distributed as email attachments. Norton AntiVirus Auto-Protect scans incoming files as they are saved to your hard drive, including email and email attachments. Email Scanning is just another layer on top of this.
To make sure that Auto-Protect is providing the maximum protection, keep Auto-Protect enabled and run LiveUpdate regularly to ensure that you have the most recent virus definitions.
</paste>

I use
OutlookExpress

Re: New email icon in system tray

for
emailing.
My OS is
WinXP Pro
SP2.
In most
cases, when
I open and
read a new
email, the
new email
icon
in system
tray
disappears.
But once in
a while, the
email icon
still remains
in the
system tray
even after
deletion of
the all new
emails.
Is there
anyway to
fix this
problem?
Craig

If you select all the new
messages and use shift +
delete, the icon
won't go away. It could also
be Norton. Disable Norton's
email scan as
it offers no added protection
and can cause problems
with OE.
