There are a couple of things that you can do to speed up the process of sending to a large number of people.

Create your email and leave the address fields empty.
File, Save As, save as an eml file to your desktop.

Create groups in the Address Book.
aGroup, bGroup, cGroup, etc.

Limit the number of addresses in a group to less than your ISP limit.

In the Address Book, View, check Folders and Groups.

Expand the folders until you can highlight a group.

Now the group members will show in the right pane.

Highlight a name, count to the 50th name, write down the name, hold down the Shift key, left click, Control + C

Create a new group. OK

Highlight the group in the left pane, Control + V.

Repeat

Click on the saved eml file.

Put your name in the To Field and aGroup in the Bcc field.

Click Send.

Change aGroup to bGroup.

Click Send.

Repeat until all groups are sent.

Note: if an address needs to be added or deleted from a group, you will have to highlight the group name in the left pane and change the name in the right pane of the Address Book.

After the initial setup of the groups, it won't take very long to send to all groups.

: <<Tell us this: Do the messages never leave your Outbox? Do copies of
: messages never show up in Sent Items?>>

:

: Yes, never leave the Outbox and as a result there's no copy in the Sent
: Items. The other day I tried againh sending only 25 recipients and they
: did

: get sent out...but I had to do this many times in order to send ALL the
: recipients just one message. Then I tried sending 50 recipients to one
: message and it also went out, but this is unacceptable to me since it
: takes

: me more repetitive work and time to send each message... I'm now
: dedicating

: this energy and time to finding another ISP.
