Hi,

On a Windows Server 2003, I use Internet Explorer to navigate the web.

Internet Explorer use a proxy server with an authentication to connect to the web.

My problem is that I have to fill the authentication form every time I launch Internet Explorer.

On classic Win XP there is a checkbox "remember my password" to tick. But on this computer there's not the checkbox.

Anyone know how to display this checkbox on the proxy authentication form box ?

Thanks for your help by advance

François
