Michael: I did want to leave word that I did create a log that has a lot of technical data that I could never begin to understand. The entry at the bottom does read: bad value was: REG_MULTI_SZ=PSched Does this mean anything? I don't know how to attach the log for you to look at.. Thanks, Alex Allen

"Michael Santovec" wrote:

Since the Telnet command worked, that means it's not an issue of port 119 being blocked entirely. Although firewalls can generally be setup to allow traffic on a port for some programs while blocking others.

And if it were some corruption in OE data files or registry, the new identity should not have had that problem.

You may want to create an NNTP log which will show more details about the communications between Outlook Express and your news server. Select Tools, Options, Maintenance, Troubleshooting, News. Then access the news server. The log will be created in the same folder with your DBX files (see Tools, Options, Maintenance, Store Folder). You may need to close OE after accessing the news server for the log to get

Thanks for getting back, Mike. I tried your
suggestion with the
command and
it responded correctly. I am not using a
router & use 2003 Office
Pro
if that
helps.... AH Allen

"Michael Santovec" wrote:

Try a Start, Run and enter
the following command

```
telnet xxxx 119
```

where xxxx is the news
server name. You can try
your ISP's news
server
and Microsoft's.

If you can connect, it should
respond with a command
window and an
identifying message from
the news server starting with
"200". If
it
does, type QUIT then press
Enter to exit.

If you cannot connect, then
you know that the problem
is outside

Re: Lost All Newsgroups/Error Message

of
OE.

Are you going through any
sort of Router?

Ooops! I
have been
unable to
set up MS
news
successfully.

I also
created a
new identity
and tried
that with no
success. I
made sure
all
firewalls
were
off before I
did this. If it
is a firewall
issue, are
there any
"simple"
remedies.

Thanks
again for
your input!

I
had
Explorer
7
downloaded,
decided
I
did
not
like
it,
so
returned
to
my
old
Explorer
6.
On
Outlook
Express,
the
newsgroups
disappeared.
When
I
try

Re: Lost All Newsgroups/Error Message

to
re-set
them,
I
get
an
error
message
that
says
"Your
