I think I need to see the actual messages. A sample message that you sent to yourself – both the version that you in the Sent Items folder and the one you got back in the Inbox.

It's best if you zip the message so that I get an exact copy of it. To do that, do a File, Save As to an EML file of a problem messages. Then Right click the saved EML file and select Send To, Compressed (zipped) folder. Then e-mail me the resulting ZIP file (you can highlight both saved EML files, then Right click and zip to a single file. Or do each as its own zip file). Alternately, you can do a Message, Forward As Attachment of a problem message. This is not as good as the zip file since the headers can be modified in transit which may obscure the problem. A simple Forward is worthless since it does not include the headers.

Well.... the name that is printed that the email said its from is redbeartwo@xxxxxxxxxxx there is a couple spaces and then my (old) hotmail passcode, then there are a few spaces and (redbeartwo@xxxxxxxx)... So its sent from the yahoo platform I believe but its for some reason picking up my hotmail information when I cannot find anywhere on this compter???

What do you think?

Re: Sending with an invalid email address

Look at the Message Source (Ctrl-F3) for one of your messages that you send to yourself.

The received headers will indicate what mail servers the message went through. If you are sending via Yahoo to yourself on Yahoo, only should show there.

Additionally, look for any X-headers that could identify a program that the message went through, such as a security program.

Thanks for the information. I have tried what you have asked. When I select CTRL f3 on my sent email it does come up with the correct yahoo email address in the FROM line. What program could be scanning this? I just reimaged my computer, so norton has not been installed yet. I have no spyware programs being utilized at this time. Maybe a windows issue?? Any help would be appreciated.

"Michael Santovec" wrote:

That information comes from Tools, Accounts, Mail, Properties, General tab.

If you have more than one mail account set

Re: Sending with an invalid email address

up in OE, in the message composition window there will be a FROM line drop down box. For a new message, this will be the default mail account. Before sending, click the down arrow if you want to select a different account.

If you are still having problems, then look at the message in the Sent Items folder. Look at the Message Source (Ctrl-F3). If the FROM header is correct, but the message arrives with something different, then some other program is modifying the information after it leaves Outlook Express. This could potentially be some anti-virus program scanning outgoing mail or some Internet security software.

Hello,

I recently set up my outlook express 6 to download and send from my yahoo email. I sent myself a test email and it says the email is from my

Re: Sending with an invalid email address

hotmail
account, Not my yahoo.
Furthermore it posts my old
password for
my
hotmail
account as well. I have tried
everything from deleteing
all
account
and
adding just my yahoo
account within outlook
express, Switching
identities..... No matter what
I try it still displays my
hotmail
email
address and password to the
receiver of my email. It is
using
the
yahoo
pathways but the display
name is my hotmail email
address and
password! I
use ypop to enable me to
download from yahoo, but
that is all so
simple and
configured correctly... Can
anyone help me???
