There's no way to create a rule in OE to stop messages where you are one of several people in the TO line (multiple names).

But you can catch messages where the sender used BCC which is how you get messages where your e-mail address is not in the TO (partial matches, blanks)

You can create the rule where the TO (and CC if you want to allow senders to CC you) does not contain your e-mail address, delete from server (if you want to never see them) or Delete it and stop processing more rules (in you would like the messages to go to the Deleted Items folder where you can review them to see if anything of value is getting caught). And make this the first rule.

However, if you are on any mailing lists that you want to receive, they generally use BCC. In that case you'd need to create a rule based on the FROM the list uses or the Subject if it puts some id in the subject. Place the rules before the above one with a Stop Processing more rules action.

Does anyone know a rule I can poput in so I only get mail with my EXACT address only; no multiple names, partial matches, or blanks?

Thanks!
