What version of Windows are you using?

At Windows Update there is an Optional update for root certificates.
Have you installed that on the PCs running OE?

See: Microsoft root certificate program members (January 2007)

to make a long story short, we installed a new Exchange 2007 server 2 months ago.

Our email admin (a stupid Mac guy that was using communiGate) decided to purchase and use a Godaddy cert for our Exchange server.

Godaddy certs are NOT in the Trusted Root Servers list in Windows.

Outlook clients work great after installing Godaddy's root cert in the trusted root servers list in windows.

OE clients do NOT.

OE clients throw up the following error, TWICE:

=====

The server you are connected to is using a security certificate that could not be verified.

Re: IMAP connection to Exchange not seeing Godaddy Cert.

A certificate chain was processed, but terminated in a root certificate which is not trusted by the trust provider.

Do you want to continue using this server?

=====

Click YES allows the mail to work.

I've installed the certs everywhere i can think of.

Why does OE not recognize the godaddy root cert that i've installed (straight from Godaddy's page) but Outlook does?

What can i do to work around this problem and get rid of the error messages?

THANKS!
