Steve,

Unsure what you're referring to when you say "I don't understand why OETool didn't have the same result.", but I assume you meant using OETool to open the message Full Screen.

I'm probably overlooking something simple, but the reason I think it didn't have the same result is that there is no way (that I can find) to Print if using OETool to make the message Full Screen.

Regards,

John

Glad you found it useful. I don't understand why OETool didn't have the same result.

cheers,

steve

Re: How to Change OE6 Print Defaults

Steve,

Thanks a million! That is a brilliant 'workaround', and works like a charm. Exactly what I've been looking for.

Not having the message headers is something I can live without, in most instances at least.

Regards,

John

Try saving the message to the desktop and then rename it from eml to mht. Then it will open in IE and it might print okay. You won't have the message headers though.

steve

Again, thanks for the suggestions.

I had already tried your first idea, using Pa
