When I search for:

inetexplorer.ie6.outlookexpress (no underscore), the only groups are the OE Stationery, and Wishlist newsgroups.

Neither of these will be of help to you.

You are in:
'microsoft.public.windows.inetexplorer.ie6.outlookexpress'
right now and there are no previous posts from your address in the last
90 days. Must have been another group.
Port 119 is for news, not email. Can you elaborate?
=====

Hi, Sorry, I'm not trying to be smart. Let me explain.
On this set-top box this group shows as:
ie6_outlookexpress (Note the under-score)

On my pc ie6.outlookexpress on a search comes up
ie6.outlookexpress.stationary

On my pc ie6.outlookpress is not the same group I and and you are
exchanging messages on now.

I,m going to go back to my computer and paste the page in that group I
referred to.
I will do to the limitations of this webtv box do so in another separate
message.
Sorry, only way I can.

Re: Unable to connect to server

Thank you for the links, I will read them and get back if I have any problems.
