que fastidio no tienen nada mas que hacer

Express files are supposed to be here: C:\Documents and Settings\Owner\Local Settings\Application Data\Identities\{265D787F-A9D6-4C31-B6F7-4D32C0D91F9D}\Microsoft\Outlook Express. However, under Owner there is no Local Settings folder to be found? Where would Local Settings be in Win XP if not under C:\Documents and Settings?

Fortunately, I am able to access Outlook Express and the .dbx files if I paste the location into Start I Run. But still don't know exactly where they are on my HDD – the window that opens just says Outlook Express?

Tools | Options | Maintenance | Store Folder will reveal the location of your Outlook Express files. Write the location down and navigate to it in Windows Explorer or, copy and paste it into Start | Run.

In WinXP, Win2K & Win2K3, the OE user files (DBX and WAB) are by default marked as hidden. To view these files in Windows Explorer, you must enable Show Hidden Files and Folders under Start | Control Panel | Folder Options Icon | View, or in Windows Explorer | Tools | Folder Options | View.

Backup & Restore:

This freeware tool backs up **everything** in OE in seconds. Then you can copy the backup to DVD. Disregard what is written in red. That is referring

Re: How to backup mailboxes?

to a different program.

Outlook Express Quick Backup (OEQB):
