I will second Bob's comments.

Sometimes the sound just randomly goes away on the recording, it's quite frustrating. It hasn't been happening much since MCE 2004, but it does indeed happen. Big adoption killer in my household unfortunately.

Here's what I've discovered so far:

- it seems to be worse if you have other "capture" devices in your system that use audio. A webcam, a microphone, a digital video camera. I would almost always lost TV sound when I had a webcam session. Now, I simply don't do that any more.
- it seems more likely to occur after a "wake from standby"

Make sure you have all of the updates (which you did), and you might want to visit the webpage of the sound card manufacturer to see if there are any newer driver packages. In particular, Creative had a few things on their web site that did not appear on windowsupdate.

Cheers,  
Pete
